Hypothesis

Do customers in their
30s and 40s in **rural** areas **spend**
more than those in the **city**?

Hypothesis

Yes, they do!

After testing our hypothesis, I have been able to verify that our suspicions were correct, and the results leave no doubt.

Findings and conclusions

Highlights

1

75% of

Amazon sales are in
3 categories:

- 1. Mobile & Tablets
- 2. Appliances
- 3. Entertainment

2

The consumer
average spend in
US in 2020-21 was

\$815

3

1st Mississippi
2nd Vermont

are the states that on
average spent the
most

4

Where

70%

customers are from
RURAL areas

5

30's &
40's

consumers from
RURAL areas spend
more on average in
the whole country

The background of the image is a dark, monochromatic texture that resembles crumpled paper or a rough, organic surface. It features a complex pattern of ridges, valleys, and folds, creating a sense of depth and tactile quality. The lighting is subtle, highlighting the peaks of the folds and casting soft shadows in the recesses, which emphasizes the irregular, hand-crafted appearance of the material.

Thank you
